Artificial Intelligence

Artificial Intelligence. AI. What is it?

Years ago, when I was in industry, equipment operators would periodically take time to examine various components associated with machines and equipment. Their findings would be documented and recorded in the context of a Quality Assurance framework. When a component exhibited wear and tear that fell outside the Quality Assurance parameters, the component would be repaired or replaced.

Fast forward to today. Humans no longer are the ones inspecting components and equipment. Sensors record the operating behavior of components and machines. The data generated by the sensors is captured to computer. The data is analyzed in the context of a Quality Assurance framework that has initially been created by a human. Over time, the computer software looks for patterns in the data which then are used to optimize decision making regarding the maintenance of components and machines. This then opens the door to the idea of Machine Learning.

Now take the idea of Machine Learning and apply it to production scheduling, equipment maintenance, inventory management, energy consumption optimization, supply chain optimization, and warehouse management. This is the world of AI.

C3AI (ticker AI)

One company that I have been watching since its IPO is C3AI (NYSE: AI). Visit their website and you can see for yourself the large corporations that have engaged them to help digitize and make more intelligent operations ranging from power generation to the US military.

C3AI made its IPO debut on December 9, 2020.

At December 9, 2020 Moon was at 0 degrees declination, Venus at -17 degrees, Mars at +7, and Mercury/Sun at -22 degrees.

In the horoscope wheel, the one pattern that stands out is a triangle with its apex at Neptune.

The above chart has been fitted with 3 green arrows. These depict the times when Venus and Mars passed through the same declination levels as they were at when the stock IPO'd in late 2020.

C3AI Natal Horoscope

On the chart on the previous page, I have labeled five points of interest, A through F.

At Point A, Sun was about to make a 0-degree aspect to the 2020 natal Venus point. Moon was making a 0-degree aspect to the 2020 natal Jupiter. Moon was also at minimum declination.

At Point B, Mars was making a 0-degree conjunction to natal Venus. Sun, Moon and Mercury were all making a conjunction to the 2020 natal Sun/Mercury point.

At Point C, Mars had just made a 0-degree aspect to the natal Saturn/Jupiter point. The Ascendant was conjunct the natal Moon point. Jupiter had advanced such that it was now at a 0-degree aspect to natal Neptune (the apex of the triangle in the natal horoscope).

At Point D, price gapped higher. Moon at the natal Moon and Moon at its declination minimum were the contributing factors.

At Point E, Moon was at its declination minimum while the Mid Heaven (MH) was passing conjunct to the natal Sun/Mercury point in the 2020 natal horoscope.

At point F, Moon was at 0 degrees declination. Venus and Mercury were passing the 2020 natal Pluto/Saturn/Jupiter point.

Sun passed these natal planets between January 12 and 19th.

On January 31, Moon will pass the natal Node location. Mercury will pass the natal Saturn/Jupiter location on February 4. Moon will pass natal Moon on February 9.

No question about it, this stock is influenced by aspects to the natal planet locations. The Company itself is growing, but still burning cash every quarter to fuel the growth. The pedigree of the senior management team is beyond impressive. Analysts understand this pedigree. What analysts are looking for is revenue growth. They will look to see the cash burn rate remains modest. With all that is happening across the Artificial Intelligence space, I can see this Company being taken over in the not-too-distant future.

Use planetary data from either the internet or from an Ephemeris Table and watch for times when Moon, Venus, Sun, and Mars pass the various planets from the 2020 natal horoscope.

Leidos Holdings (Nasdaq: LDOS)

Leidos Holdings is a leader in all things AI and beyond. Leidos uses AI and Machine Learning for cyber security. They design complex software for mission critical applications where failure is not an option. They design prototypes of complex technology at rapid speeds. In fact, Leidos has now been awarded a contract to build a lunar landing module to put a man on the moon (again) by 2025.

Where Leidos differs from C3AI, is Leidos is a serious money maker.

Leidos went public on October 13, 2006.

The one feature in the natal horoscope that catches my attention is the large triangle with corner points Moon, Uranus, and Mercury. There is a second triangle as well with corners Saturn, Neptune, and Mercury.

At the IPO date, Mars was at -8 degrees declination, Venus at -1 degree. Jupiter, Pluto, Neptune, and Mercury were all around -16 degrees declination.

At Point A, the Ascendant was passing the natal Sun, Venus, Mars location at 16-23 Libra.

At Point B, Moon was passing the natal Sun, Venus, Mars location at 16-23 Libra

At Point C, Moon was about to start passing the natal Sun, Venus, Mars location at 16-23 Libra

At Point D, the Mid-Heaven (MH) was passing the natal Mercury/Jupiter location which forms part of the large triangle in the 2006 IPO horoscope.

At Point E, Moon and Mercury are passing natal Saturn. The Mid Heaven is passing natal Pluto. The Ascendant is at the natal Node. Venus is at natal Moon. That's some pretty serious alignment. Something had to change on the price trend, and it did...

At Point F, Moon was about to start passing the natal Sun, Venus, Mars location at 16-23 Libra. Sun was about to make a conjunction with the natal Sun, Venus, Mars location as well.

At Point G, Sun and Venus were making a conjunction to the natal Mercury/Jupiter location which forms part of the large triangle in the 2006 IPO horoscope.

At Point H, the Ascendant is at the natal Saturn point. Venus and Mercury were passing natal Pluto.

At each of these points, Moon was either at 0, minimum or maximum declination.

January 14 saw Moon pass conjunct to the natal Sun, Venus, Mars location at 16-23 Libra.

January 22 will have Venus passing the Neptune location at 17 Aquarius.

February 5 will have Sun passing the Neptune location at 17 Aquarius.

February 9-10 will have the Moon passing the natal Sun, Venus, Mars location at 16-23 Libra.

February 17 will have the Mid-Heaven (MH) passing the Neptune location at 17 Aquarius.

February 23 will have Mercury passing the Neptune location at 17 Aquarius.

In terms of planets passing the same declination level as they were at the IPO date, February 20 will have Venus passing its natal declination.

In terms of Fibonacci, the move from Point B to Point F was a Fibonacci 78.6% retracement of the move from A to B.

The move F to G was 78.6% of the move from A to B. The move to Point H was a feeble attempt at surpassing the 78.6% amount. Not surprisingly, this effort failed and the share price started to decline.

If price hits \$96.5, a Fibonacci 61.8% retracement of the F to H move will have unfolded.

If price hits \$92.5, a Fibonacci 78.6% retracement of the F to H move will have unfolded.

Leidos is a money-making stock to pay close attention to. Watch the Stochastic indicator, watch the Ergodic Oscillator (if your software platform has this indicator).

Autonomous Vehicles

Here in farming country where I live, I have had opportunities to ride with farmers in their combine harvesters. Time is money. Accuracy is money. These harvesters are all equipped with the ability to steer a straight-line using GPS signals. The goal of optimizing the harvesting of a field of wheat is thus accomplished with reduced input from the person driving the machine.

Somehow, the concept of self-driving has been extended to motor vehicles. Call me old-fashioned, but I fail to see why we need cars that self drive as they travel along the motorway.

However, self driving is a theme. One stock that I am watching is **Luminar Technologies** (Nasdaq: LAZR).

Luminar Technologies epitomizes the people pedigree that will attract money to technology companies. Austin Russell grew up in California. At the age of 15 he applied for a patent pertaining to lawn sprinklers. His parents obviously recognized that their child was a prodigy. He needed more than lawn sprinklers. They introduced him to an entrepreneur, Jason Eichenholz who was experimenting with lasers. After high school, Russell attended University to study applied physics. He was obviously too smart for a physics program; he dropped out after 3

months. He and Eichenholz then founded Luminar as a private company. Their focus was using *Lidar* beams to help vehicles navigate.

Shine a beam of light at an object. Some of that light will reflect back. Measure the intensity of the reflected light. Calculate how far away the object is. Now, replace that light beam with a concentrated laser beam. This is Lidar.

Lidar is not new. In 1961, the Hughes Aircraft Company introduced the first Lidar-like system. It was intended for satellite tracking by calculating distances to a satellite through measuring the time for a laser signal beamed at the satellite to return to Earth and make contact with an electronic sensor.

The analytical formula that underpins Lidar is: $d = (c * t)/2$; where d is distance, c is the speed of light, and t is the time for the detector to receive the bounced-back laser signal.

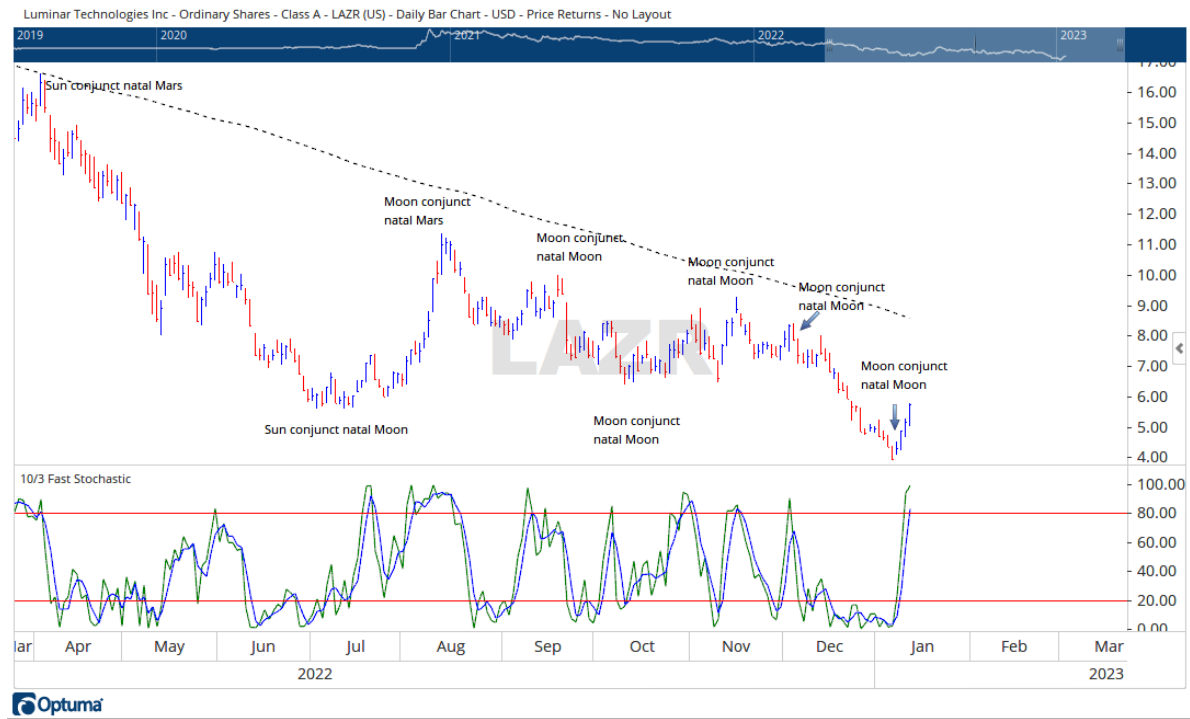

On December 3, 2020 Luminar went public. The ticker symbol is LAZR.

Since then, Luminar has wasted no time. It has a deal with Volvo (a subsidiary of Chinese carmaker Geely). The company also has partnerships with Daimler Truck AG, and Intel Corp's Mobileye.

As we start 2023, LAZR has announced that its relation with Volvo is now bearing fruit. The Volvo X-90 car is now equipped with Luminar technology. Chinese automaker SAIC is now also using Luminar technology on its model R7 car.

Financial statements indicate Luminar will have close to \$40 million revenues in 2022. The Company has \$500 million cash on hand. Luminar will survive. This is a stock worthy of attention.

Astrology definitely plays a role in understanding the price chart. One cosmic event that catches my attention is Moon making 0-degree conjunctions to the natal Moon (at 18 Cancer in the Dec 2020 IPO horoscope). Price will have to get above the \$7 level before the major trend turns bullish. The overall NASDAQ market will also have to display some strength. As long as the entire tech sector is tepid, it will be hard for even successful companies like LAZR to rocket higher in price. However, what a person can do is focus on short term trading. Use the Fast Stochastic chart indicator and also use cosmic events such as Moon/natal Moon to look for trade entry points.

Luminar (LAZR) will survive. Watch the Stochastic indicator, watch the Ergodic Oscillator (if your software platform has this indicator). Watch the Moon passing the natal Moon at 18 Cancer.

Astro Events Coming

Looking into the immediate future:

- January 23: Moon VOC (Void of Course)
- January 24: Moon passes Neptune and the NYSE natal mid-Heaven point at 24 Pisces
- January 30: Mercury at its greatest westerly elongation

- January 30: Moon passes NYSE co-ruler Mars
- February 1: Moon VOC
- February 2: Moon passes 14 of Cancer
- February 2: Moon at maximum declination
- February 6: Moon VOC
- February 11: Sun 120-degrees trine NYSE natal Jupiter.

The S&P 500 is behaving in accordance with Fibonacci mathematics. On the above chart, the quantity L to M is 68.1% of K to L. The S&P has been rallying during this Mercury retrograde period. How much more can it go? One possible answer is it can move up until it tests the point L. This will be a 61.8% move of the quantity K to L.

As I finish these comments, the S&P futures are off 12 points. The Bradley Model has a significant inflection point here and now. The next minor inflections are February 2nd and February 10th.

Heliocentric Cycles

In the next issue I will be discussing in detail the use of heliocentric cycles. I was contacted this week by a person from Sweden who found me on social media. He was excited to tell me about the work of Bradley Cowan. I did some research and discovered that Mr. Cowan has written some books on planetary cycles. His books are very expensive (\$\$\$).

What I was able to figure out (without actually buying his expensive stuff) was that he focused on **heliocentric** planetary movements. For example, at the March 23, 2020 Covid panic lows **Mars and Uranus** were 220 degrees apart. Cowan then poses the question – when will these planets be $220+90 = 310$ degrees apart? When will they be 400 degrees apart? And so on....

He also studied Jupiter and Uranus, Saturn and Uranus, and Venus and Earth.

I have back-tested his ideas and I find that in the immediate aftermath of a significant low or high, the cyclical intervals do align (most of the time) fairly close to swing peaks and swing valleys on the price chart of the Dow Jones Average. However, some of these peaks and valleys are small in magnitude. As time goes on, the predictive power of the cycles disipates. Then you have to look for another significant high or low and start the process again. Is his technique perfect? No, it is not. Is his technique the predictive tool that he claims it to be? I am *not* yet convinced. However, I do think the dates identified by his technique are worth calculating and noting on your calendar.

If you are willing to spend some time studying cycles, I suggest you find some heliocentric data. Search on-line using the term '*heliocentric planetary data*' and you should land on a site called *Astro.com*. Scroll down on the pages until you find the link to heliocentric ephemeris data.

Starting at the market peak of **January 4, 2022** you will see that heliocentric Venus and Earth were apart by a few degrees. Using the ephemeris data, determine when Venus and Earth are apart by 15, 30, 45, 60, 75, 90, etc.... degrees. Now, see if these dates come close to swing peaks or swing valleys on a Dow Jones Average chart.
